Chapter 1

About the API

Summary

The Payroll Output Application Programming Interface (API) is used to retrieve the output of a payroll run.

Process Overview

Your data connector application would be used by the client's Payroll Practitioner (actor) to retrieve Payroll details based on the payroll month.

Postman Collection

Postman allows you to import a collection of APIs, created by others, so you can try them out. For more information on Postman, see [Making Your First API Call Using Postman](#).
