Chapter Contents

Chapter 5

Use Case: Updating Worker Address

Application Scope

Please check the appendix F for the details on fields and data validation for these APIs.

Chapter 5

Use Case: Updating Worker Address

Application Scope

The following canonical needs to be added to your application scope to enable this use case:

`/hr/workerInformationManagement/workerManagement/addressManagement/worker.legalAddress.add`

`/hr/workerInformationManagement/workerManagement/addressManagement/worker.legalAddress.change`

API Usage

For eXpert Brazil, only one worker address can be registered at each given time, where this address is considered the legal and personal worker address. Because of that, when you send a Address Add call, the system will have the same behaviour as the Address Change API, where the worker's address will be updated to the new value sent. So you could use only the Change operation to fully maintain the fields, without having to develop the Add API if it would be best for your system.

Also, the address is a mandatory information in Brazil and because of that, the eXpert Brazil won't support the Address Remove APIs, as there's no possibility to keep this field as blank. When sending a new address, please keep in mind that due to the eSocial validation, for addresses in Brazil is mandatory that the postal code (CEP) is a valid code as registered in the Postal Service ("Correios") database, which means your system should have the postal codes list up to date to avoid rejections.

Method	URI	Description	GitHub Sample Payload	GitHub Sample Response Payload
POST	<code>/events/hr/v1/worker.legal-address.add</code>	Changes the address of a worker.	Worker Legal Address Add Request Example	Worker Legal Address Add Response Example
POST	<code>/events/hr/v1/worker.legal-address.change</code>	Changes the address of a worker.	Worker Legal Address Change Request Example	Worker Legal Address Change Response Example

Please check the appendix F for the details on fields and data validation for these APIs.
