March 2021

January 2021

Process Overview

Use Case 1

Use Case 2

Supported Product Version and Customer Base

Required Setup Steps

Configuring the Required Fields in the ADP Recruiting Management User Interface (UI)

## Chapter 1

# About this API

## Summary

The Job Requisitions V1 Application Programming Interface (API) is used to retrieve a single job requisition or a list of job requisitions for specific client.

Creation of a job requisition is also supported for a specific client thorough **job-requisition.add**.

## What's New in this Guide?

### February 2023:

- Updated API endpoints and samples to link to API explorer.

### June 2021

- Updated information on \$top and \$skip parameters Chapter 2 > Supported OData Query Options

### March 2021

- Updated the Tips to Handle section under Supported OData Queries of [Chapter 2: Getting a Single Job Requisition or a List of Job Requisitions](#)
- Updated Postman collection under this Chapter

### January 2021

Updated list of fields that trigger event notifications for a requisition under "Field Changes that trigger Event Notifications" in [Chapter 4: Supported Event Notifications](#).

## Process Overview

The following table shows an illustration of how your data connector application would be used by a client.

## Use Case 1

	Actor	Task Description
1	Practitioner	Triggers and sends the GET request to ADP Recruiting Management using the application to retrieve Job Requisitions.
2	Application	Get the corresponding job requisitions detail using the Job Requisition V1 API.

## Use Case 2

	Actor	Task Description
1	Practitioner	Triggers and sends the POST request to ADP Recruiting Management using the application to retrieve Job Requisition Add API, with a JSON payload comprising of requisition data fields.
2	Application	Creates a new job requisition in ADP Recruiting Management using the Job Requisition Add API.

## Supported Product Version and Customer Base

This Job Requisitions API is for U.S clients.

## Required Setup Steps

Client level and vendor specific settings can be configured in the ADP Recruiting Management application. Refer to the following table on setup pages.

Records	ADP Recruiting Management
Marketplace api Client level setting	Select <b>Setup &gt; Basic Client Setup &gt; (Section) Marketplace API</b> . All available APIs can be enabled here, along with event notifications and any status based triggers.
Marketplace api vendor specific setting	Select <b>Setup &gt; Basic Client Setup &gt; (Section) Marketplace API</b> . (Select Vendor from list). Specific operation codes, status based configuration can be enabled here.

# Configuring the Required Fields in the ADP Recruiting Management User Interface (UI)

1. Go to **Grid > Req Forms Grid**.
2. In the **Type** column, click **Folio**.

The Required Field configurations are displayed on the **Form Design** page.
