Known Issues and Limitations

Issue 1: Meta call response missing data

Issue Description

Impacted APIs

Suggested Workaround

Issue 2: Missing exception handling when Invalid payruncode is passed in the request

Issue Description

Impacted APIs

Suggested Workaround

Issue 3: Missing exception handling when Invalid value is given for the query \$filter

Issue Description

Impacted APIs

Suggested Workaround

About the API

Summary

The Payroll Output Application Programming Interface (API) is used to retrieve the output of a payroll run.

What's New in this Guide?

January 2023:

- Updated API endpoints and samples to link to API explorer.

Supported Product Version and Customer Base

The Payroll Output API is supported for all RUN Powered by ADP bundles.

Process Overview

Your data connector application would be used by the client's Payroll Practitioner (actor) to retrieve Payroll details based on the **payruncode**.

Use Case: Retrieving Payroll Output Details

API Usage

For API related information please refer [Payroll Outputs](#) under API Explorer.

Method	Uniform Resource Identifier (URI)	Description
GET	/payroll/v1/payroll-output	Returns a list of all available payroll outputs the requester is authorized to view.
GET	/payroll/v1/payroll-output/{payruncode}	Returns the payroll output of a payruncode , which includes active and terminated employees' payment information by the payrun period. NOTE: The Payroll Output API has the list of associates information who are active for a particular payroll run. But, it's not mandatory all associates from employees should be displayed in the Payroll Output API. The number of active associates for a payroll run are only seen in the output. We can compare the Payroll Summary Report in RUN Powered by ADP to see how many associates are active for a payroll run with the Payroll Output API response.
GET	/payroll/v1/payroll-output/meta	Requests meta information.

The [/payroll/v1/payroll-output](#) API lists the details of the **payruncodes**. To see the full details of the payroll output information for a **payruncode**, the user needs to make a call based on the **{payruncode}** as follows: [/payroll/v1/payroll-output/{payruncode}](#)

Responses

For API related information please refer [Payroll Outputs](#) under API Explorer.

Method	URI	Description	Response Code
GET	/payroll/v1/payroll-output/fp-ayruncodel	When a Regular Payroll is run.	200 OK
GET	/payroll/v1/payroll-output/fp-ayruncodel	When a client practitioner voids a check for an associate and provides a Manual Check to an employee in the client's RUN Powered by ADP payroll system. Later, the client practitioner runs a Regular Payroll. The Void Check and Manual Check are included in the Regular Payroll commit.	200 OK
GET	/payroll/v1/payroll-output/fp-ayruncodel	When a Special Payroll is run.	200 OK
GET	/payroll/v1/payroll-output/fp-ayruncodel	When a client practitioner voids an associate's check (to make corrections) and runs a Special Payroll to pay the associate again. The Void Check gets included in the Special Payroll. The associate Payment Instruction section of the API Output Response indicates the voided check and Special Payroll values.	200 OK
GET	/payroll/v1/payroll-output/fp-ayruncodel	When a pending Void Check, Special Payroll, and Third Party Sick Pay are included in a Special Payroll.	200 OK
GET	/payroll/v1/payroll-output/fp-ayruncodel	When an Adjustment is run. NOTE: An Adjustment doesn't result in any checks and no one gets paid. It's used to make year-end corrections for W2's or to correct balances when a new client is onboarded onto RUN Powered by ADP, and so on.	200 OK

Application Scope

The canonical URI corresponding to the API needs to be added in the Consumer Application Registry (CAR) for the subscription following which a user can access this API and make successful API calls.

The following canonical needs to be added to your application scope to enable this use case:

`payroll/payrollManagement/payrollProcessingResults/payrollOutputManagement/
payrollOutput.read`

Request Header Parameters

There are no request header parameters, in addition to the ADP standard header parameters.

Supported OData Query Options

This use case supports Query String Options as defined by Open Data Protocol (OData). For more information about OData, see the [Introduction to ADP API Open Data Protocol \(OData\)](#).

For API related information please refer [Payroll Outputs](#) under API Explorer.

Query String Option	Description	Example

Query String Option	Description	Example
\$filter	Filters a collection of resources addressed by a request Uniform Resource Locator (URL). Only items for which the expression evaluates to true are included in the response.	/payroll/v1/payroll-output? \$filter=payrollProcessingjobID eq '99785665-201501090001'

Sequence of Interactions

The following are the steps shown in the previous diagram:

1. Your consumer application makes a request to the ADP API endpoint to GET Payroll Output Details based on **payruncode**.
2. The ADP API endpoint responds to your consumer application with payroll output information.

Data Dictionary

All fields listed in the **Data Dictionary** chapter are supported for this use case.

About Configuration Tags

Tag	Description
CR	Regular Pay Calendar Entry
CS	Special Pay Calendar Entry
AC	Adjustment Calculation
T	Third Party Sick Pay
V	Void Check
M1	Manual Check

Regular Payroll (CR), Special Payroll (CS), and Adjustments (AC)

RUN Powered by ADP has two types of payroll commits: **Regular Payroll** and **Special Payroll**. Payouts resulting out of these two payroll commits are indicated by a CR (regular) and CS (special).

Adjustments are commits where a client needs to have the ability to adjust any piece of payroll information for an associate without producing a check.

Void Checks (V), Manual Checks (M1), and Third Party Sick Pay (T)

Whenever a Client Practitioner in the RUN Powered by ADP portal voids one or more associate's paycheck, the Void Checks get included in the next Regular Payroll or Special Payroll run. As a result, the Payroll Output API, under the **associatePayments Instructions**, will also include the Void Check instructions for all the associates whose checks were made void by the practitioner. The Configuration Tags are used to identify those voids.

Similarly, Manual Checks (M1) and TPSP get included in the next Special Payroll or Regular Payroll run and are identified by their respective configuration tags in the API response.

Identifying Payroll Types from AssociatePayroll Instructions in the API Output Response

For each associate, **associatePayroll Instruction** in the Payroll Output API response can have all of the configuration-tags: T, V and M1, including either CS or CR, but not both (to indicate whether it was a Special Payroll or a Regular Payroll, respectively).

For an Adjustment run, AC is the only tag present. This helps in differentiating a payroll output resulting out of an Adjustment.

Responses

You may encounter exceptions outside your common success scenarios. You must account for these exceptions during your initial development.

For more information, see [API Common Exceptions and Tips for Handling](#).

For API related information please refer [Payroll Outputs](#) under API Explorer.

Response Code	Condition	messageTxt	GitHub Sample Request Payload
200 OK	Retrieve the payroll output details.	NA	NA
200 OK	Retrieve the payroll output details based on the payruncode .	NA	NA
200 OK	Retrieve the payroll output details with an invalid payruncode .	{"payrollOutputs": []}	NA
200 OK	Incorrect query parameters and value when using filter in the request. For example: <code>/payroll/v1/payroll-output?\$filter=payrollProcessingJobID eq 'G3P3QYJXG79N3EB-20190302'</code>	{"payrollOutputs": []}	NA

Chapter 3

Use Case: Event Notifications

Your application should subscribe to and process the following event change notifications to synchronize data in the event of a data change in the ADP system. The changes described in the following table trigger event notification messages for the Payroll Output API.

For more information about ADP Notifications, see [ADP Event APIs and Event Notification Guide](#).

For API related information please refer [Payroll Outputs](#) under API Explorer.

Changes Triggering a Notification	Application Scope	eventNameCode Value
Change in payroll processing job status in RUN Powered by ADP user interface (UI).	<code>/payroll/payrollManagement/payrollProcessing/payrollJobManagement/payrollJobStatus.change.eventNotify.subscribe</code>	<code>/events/payroll/v1/payroll-processing-job.status.change</code>

The previous event is supported when an action is done in the RUN Powered by ADP UI, not through the Payroll Output API.

Possible values for the **payrollProcessingJobStatusCode** are shown in the following table.

PAYRUN_STATUS_CODE	PAYRUN_STATUS_DESC
A00	Set-up incomplete
A01	Payrun Set-up
A11	Re-calc required

PAYRUN_STATUS_CODE	PAYRUN_STATUS_DESC
B01	Pre-calc in process
B09	Pre-calc review
C01	Calculate Pay in process
C09	Post-calc review
F01	Awaiting Commit
F11	Awaiting Commit re-start
M01	Commit in process
M99	Committed
T01	Transmission in process
T11	Awaiting re-transmission
Z98	Canceled
Z99	Payrun Complete

Chapter 4

Data Dictionary

Overview

The data dictionary provides the schema resource to application UI field mapping. The Payroll Output API manages the data displayed in the RUN Powered by ADP UI under **Reports**.

Chapter 5

Frequently Asked Questions

Question: How do I calculate data for Total Cash Required?

Description

In the RUN Payroll Liabilities Report, there is a field named **Total Cash Required**. How can I leverage the API response to derive the same value?

Answer

Total Cash Required Calculation

Total Cash Required = Debit for Check / Debit for FSDD + Debit for Taxes + Debit for ADP Retirement Plan

Data	API Node in the response
------	--------------------------

Data	API Node in the response
Debit for Check / Debit for FSDD	NET_PAY
Debit for Taxes	TOTAL_STATUTORY_DEDUCTION_SUMMARY
Debit for ADP Retirement Plan	ADP_RETIREMENT_PLAN
Debit for Pay-by-Pay	PAY_BY_PAY
Debit for GPS (Garnishment Payment Services)	GARNISHMENT

NET_PAY API Node

Direct reference: `payrollOutputs/payrollSummary/nonStatutoryDeductionsSummary/nonStatutoryDeduction/SummarySections/nonStatutoryDeductionsSummaryItems/deductionID.NET_PAY`

NET_PAY = Debit for Check / Debit for FSDD in the payroll liability report
NET_PAY calculation reference API nodes (
`payrollOutputs/payrollSummary/paymentDistributionsSummary.totalCheckAmount.amountValue +`
`payrollOutputs/payrollSummary/paymentDistributionsSummary.totalDirectDeposits.totalDepositAmount\[1\].amountValue +`
`payrollOutputs/payrollSummary/paymentDistributionsSummary.totalDirectDeposits.totalDepositAmount\[2\].amountValue +`
`payrollOutputs/payrollSummary/paymentDistributionsSummary.totalDirectDeposits.totalDepositAmount\[3\].amountValue +`
`payrollOutputs/payrollSummary/paymentDistributionsSummary.totalDirectDeposits.totalDepositAmount\[4\].amountValue +`
`payrollOutputs/payrollSummary/paymentDistributionsSummary.totalDirectDeposits.totalDepositAmount\[4\].amountValue +`
`payrollOutputs/payrollSummary/paymentDistributionsSummary/totalCashAmount.amountValue`)

TOTAL_STATUTORY_DEDUCTION_SUMMARY API Node

Direct reference: `SUM(TOTAL_STATUTORY_DEDUCTION_SUMMARY)` = Debit for Taxes in the payroll liability report

`/payrollOutputs/payrollSummary/statutoryDeductionsSummary/statutoryDeductionsSummarySections/statutoryDeductionsSummaryItems/associateDeductionAmount/amountValue`
`+`
`/payrollOutputs/payrollSummary/statutoryDeductionsSummary/statutoryDeductionsSummarySections/statutoryDeductionsSummaryItems/employerPaidAmount/amountValue`

ADP_RETIREMENT_PLAN API Node

Direct reference: `ADP_RETIREMENT_PLAN` = Debit for ADP Retirement Plan in the payroll liability report

`payrollOutputs/payrollSummary/nonStatutoryDeductionsSummary/nonStatutoryDeductionSummarySections/nonStatutoryDeductionsSummaryItems/deductionID.ADP_RETIREMENT_PLAN`

PAY_BY_PAY API Node

Direct reference: `PAY_BY_PAY` = Debit for Pay-by-Pay in the payroll liability report

`payrollOutputs/payrollSummary/nonStatutoryDeductionsSummary/nonStatutoryDeductionSummarySections/nonStatutoryDeductionsSummaryItems/deductionID.PAY_BY_PAY`
GARNISHMENT

GARNISHMENT API Node

Direct reference: `GARNISHMENT` = Debit for GPS (Garnishment Payment Services) in the payroll liability report

`payrollOutputs/payrollSummary/nonStatutoryDeductionsSummary/nonStatutoryDeductionSummarySections/nonStatutoryDeductionsSummaryItems/deductionID.GARNISHMENT`

Chapter 6

Known Issues and Limitations

Issue 1: Meta call response missing data

Issue Description

The meta response should give information on the resource path used as part of the **\$select** query and resource path used as part of the **\$filter** query. But, the meta response does not have any such information.

Impacted APIs

Method	URI	roleCode Value
GET	/payroll/v1/payroll-output/meta	practitioner

Suggested Workaround

Use this documentation as a reference.

Issue 2: Missing exception handling when Invalid payruncode is passed in the request

Issue Description

When the </payroll/v1/payroll-output/{payruncode}> API is called with an invalid **payruncode**, the expected output should be 400 Bad Request with the appropriate error, but the API is giving a 200 OK response.

Impacted APIs

Method	URI	roleCode Value
GET	/payroll/v1/payroll-output/{payruncode}	practitioner

Suggested Workaround

There are no workarounds available.

Issue 3: Missing exception handling when Invalid value is given for the query \$filter

Issue Description

This occurs when the Payroll Output API is called with **\$filter** (such as [/payroll/v1/payroll-output?filter=payrollProcessingJobID eq 'G3P3QYJXG79N3EB-20190302'](/payroll/v1/payroll-output?filter=payrollProcessingJobID%20190302)). When an invalid value is passed for the **payrollProcessingJobID** filter, the API is giving a 200 OK response, but the expected output should be 400 Bad Request with the appropriate error.

Impacted APIs

Method	URI	roleCode Value
GET	/payroll/v1/payroll-output	practitioner

Suggested Workaround

There are no workarounds available.

Issue 4: Total amount is not matched to actual

Issue Description

Misc reimbursement non-taxable value not added in sum value of path
/payrollOutputs/associatePayments/payments/paymentSummary/earnings/payrollAccumulations/accumulatedAmount/amountValue but we can see value
is available in path below

/payrollOutputs/associatePayments/payments/paymentSummary/earnings/earningsSections/earningsItems/earningAmount/amountValue
